An Introduction to Calculus (2)

1. Find the following limits.

a. $\lim_{x \rightarrow 5} (2x + 3)$

b. $\lim_{x \rightarrow 2} (-x^2 + 3x - 2)$

c. $\lim_{x \rightarrow 1} \frac{x-1}{x+2}$

d. $\lim_{x \rightarrow -1} (x^3 + x^2 + x + 1)$

e. $\lim_{x \rightarrow 1} \frac{1-x^3}{x^2-1}$

f. $\lim_{x \rightarrow 1} \frac{\sqrt{x}-2}{x-4}$

g. $\lim_{x \rightarrow 1} \frac{x^3-x^2-x+1}{x^3-2x^2+x}$

h. $\lim_{x \rightarrow \frac{1}{2}} \frac{3-12x^2}{2x^2+x-1}$

i. $\lim_{x \rightarrow 3} \frac{x^3-9x^2+27x-27}{x^3-27}$

j. $\lim_{x \rightarrow -1} \frac{\sqrt{x+9}-2\sqrt{2}}{x+1}$

k. $\lim_{x \rightarrow 0} \frac{\sqrt{9-x}-\sqrt{9+x}}{x}$

l. $\lim_{x \rightarrow 1} \frac{\sqrt{x}-1}{\sqrt[3]{x}-1}$

2. If $\lim_{x \rightarrow 1} f(x) = -2$ and $\lim_{x \rightarrow 1} g(x) = 3$, then what is the value of $\lim_{x \rightarrow 1} \frac{[f(x)]^3 + [g(x)]^2}{5 - 2g(x)}$?

3. Let $a < b$ be real numbers. Consider two linear functions as shown in the graph.

Evaluate $\lim_{x \rightarrow a} \frac{f(x)}{g(x)}$.

4. Consider the piecewise function $f(x)$ defined below, where A is a constant.

$$f(x) = \begin{cases} A^2x - 3A & \text{if } x \geq 1 \\ -2 & \text{if } x < 1 \end{cases}$$

Determine all values of A so that $\lim_{x \rightarrow 1} f(x)$ exist.

5. The greatest integer function (or the step/floor function) is defined as $f(x) = [x] = n$, where n is an integer such that

$$n \leq x < n + 1$$

a. Sketch the graph of $f(x)=[x]$.

b. For what values of p do the following one-sided limits exist?

i. $\lim_{x \rightarrow p^-} f(x)$

ii. $\lim_{x \rightarrow p^+} f(x)$

c. For what values of p do the right and left hand limits exist, but $\lim_{x \rightarrow p^-} f(x) \neq \lim_{x \rightarrow p^+} f(x)$?

d. For what values of p does $\lim_{x \rightarrow p} f(x)$ exist?

6. Analyse the continuity of the functions:

$$\text{a. } f(x) = \begin{cases} \sin(x) - 1, & x < -\pi \\ x^2 - \pi^2, & -\pi \leq x \leq 0 \\ -\pi^2 + x, & x > 0 \end{cases}$$

$$\text{b. } f(x) = \begin{cases} \frac{|x|}{x} & \text{if } x \neq 0 \\ a & \text{if } x = 0 \end{cases} \text{ where } a \text{ is a real number.}$$

7. Give an example of functions $f(x)$ and $g(x)$ such that $\lim_{x \rightarrow 1} (f(x) + g(x))$ exists but $\lim_{x \rightarrow 1} f(x)$ and $\lim_{x \rightarrow 1} g(x)$ do not exist.

8. Give an example of function $f(x)$ such that $\lim_{x \rightarrow 3} f^2(x)$ exists but $\lim_{x \rightarrow 3} f(x)$ do not exist.

9. For each of the following, sketch the graph of a function $f(x)$ that satisfies the given description.

a. f is continuous for all $x \neq 2$, and has a removable discontinuity at $x=2$.

b. The domain of f is $\{x | 0 \leq x \leq 1, x \in \mathbb{R}\}$, f is continuous from the right at $x=0$, continuous on $0 < x < 1$, and has an infinite discontinuity at $x=1$.

10. Find the value of a for which the following limit statement is true:

$$\lim_{x \rightarrow 1} \frac{\sqrt{a-x} - \sqrt{8+x}}{x-1} = -2$$

11. Evaluate the following limits, using an answer of $+\infty$ or $-\infty$ whenever appropriate.

a. $\lim_{x \rightarrow \infty} \frac{-14x+37}{7x-3}$

b. $\lim_{x \rightarrow -\infty} \frac{100-3x^2+7x^5-6x^7}{2x^7-1}$

c. $\lim_{x \rightarrow -\infty} \left(x - \frac{x^2-4x+1}{x-3} \right)$

d. $\lim_{x \rightarrow -\infty} \frac{\sqrt{x^2+2}}{x+1}$
